光纤数的代号

用光缆中类别光纤的实际有效数目的数字表示。必要时，也可用松套管数和每管光纤数为基础的计算式并加圆括号来表示。

例如：18 可用 (3×6) 或 $(2 \times 8 + 1 \times 2)$ 等表示。

光纤类别的代号

光纤类别的代号

单模光纤类别就采用它的产品分类代号 B 表示，多模光纤采用产品分类号 A 表示，再以数字表示不同种类的光纤。

常用代号如下：

- B1.1 二氧化硅（普通）单模光纤（B1.1 可简称为 B1）
 - B1.2 二氧化硅系 1550nm 低损耗单模光纤
 - B2 二氧化硅系色散位移单模光纤
 - B4 二氧化硅系非零色散位移光纤
 - A1a 二氧化硅系 50/125 μm 多模光纤
 - A1b 二氧化硅系 62.5/125 μm 多模光纤
- 必要时在光纤类别代号后，可注明单模光纤模场直径标称值（ μm ），并用“/”与类别代号划开。

光纤传输特性的代号

单模光纤传输特性的代号由 a 及 bb 两组数字代号构成，放在圆括号内。其中：

a 表示使用波长的代号，是一位数。其数字代号规定如下：

- 2 使用波长在 1310nm 区域
- 3 使用波长在 1550nm 区域

bb 表示衰减系数的代号，是两位数。其数字依次为光缆中单模光纤的衰减系数（dB/km）分类数值的十分位和百分位数字。

例如：使用波长在 1310nm 区域，光缆中光纤衰减常数不大于 0.36dB/km 的单模光纤，传输特性代号为：(236)。同一光缆适用于两种及以上波长，并具有不同传输特性时，应同时列出各波长上的规格代号，并用“/”划开。例如：(236/322)

A3.5 适用温度特性的代号

适用温度特性的代号由表 1 所列温度范围代号 (A、B、C) 和一个数字代号组成，该数字代号为在此温度范围内光缆允许附加衰减值的分级号为 0，可省略。

例 1: 在 $-20^{\circ}\text{C} \sim +60^{\circ}\text{C}$ 温度范围内，光缆最大允许附加衰减值为 1 级 (0.10dB/2km)，则代号为 C1

例 2: 在 $-40^{\circ}\text{C} \sim +60^{\circ}\text{C}$ 温度范围内，光缆无明显附加衰减，则代号为 A0，可省略为 A。

Optic Fiber Number Code

It is indicated with the actual figured of optic fiber in FOC. It is also indicated with the calculation formula in circular brackets as the example if neccessary. for example, (3×6) of $(2 \times 8 + 1 \times 2)$ for 18.

Optic Fiber Category Code

Code B means single-mode optic fiber, and code A means multi-mode optic fiber.

The digits as the following should be attached to the code to further indicate different category of optic fiber.

Common Code

SiO₂(Common)Single-mode Optic Fiber(or abbreviated as B1)
SiO₂1550nm Low Loss Single-mode Optic Fiber
SiO₂ Dispersion Shift Single-mode Optic Fiber
SiO₂ Non-zero Dispersion Shift Single-mode Optic Fiber
SiO₂ 50,125 μm Multi-mode Optic Fiber
SiO₂ 62.5/125 μm Multi-mode Optic Fiber
The nominal mode field diameter of optic fiber may be marked followingt he category code above with symbol “/” if necessary

Transmission Characters Code

The code of single-mode optic fiber consists of “a”, one-digit figure and “bb”, a twodigit figurei in circular brackets.

“a” represents wavelength in application as follows:

- 2 at wavelength 1310nm
- 3 at wavelength 1550nm

“bb” represents attenuation coefficient, and is 100 times of the actual attenuation coefficient value(dB/km).

for example:If the attenuation constant of optic fiber in FOC is no more than 0.36dB/km at wavelength 1310nm, the code “(236)” should be adopted.If the same FOC has different transmission characters at two or more kinds of wavelength, all codes at different wavelengths should be indicated and marked with “/” for their separation.

A3.5 Application Temperature Characcters Code

The code consists of a code of temperature range listed in Form 1(A,B,C) and a digit code. The digit code is omissible if the allowed additional attenuation grade within the temperature range is “0”.

Example 1: If the allowed additional attenuation grade within temperature range of $-20^{\circ}\text{C} \sim +60^{\circ}\text{C}$ is “1”, the code “C1” should be adopted.

Example 2: If the FOC has no obvious additional attenuation within temperature range of $-20^{\circ}\text{C} \sim +60^{\circ}\text{C}$, the code “A0” may be adopted or omitted as “A”

光缆运输、敷设及安装注意事项

Cautions in Transportation & Mounting of FOC

- 1、装有光缆的光缆盘应按盘侧板面所标示的方向进行滚动，滚动距离不宜过长，一般不宜超过 20 米，滚动时应注意防止障碍物损坏包装板。
 - 2、装卸光缆时应使用铲车等起重设备或特别台阶，严禁光缆盘从车上直接滚下或抛下。
 - 3、严禁装有光缆的光缆盘平放或叠放，在车厢内的光缆盘均需设防滑木块。
 - 4、光缆不宜多次倒盘，以免影响光缆内部结构的完好性，光缆敷设前应进行外观检查、核对规格型号、数量、测试长度和衰减等单盘检验和验收，每盘光缆在护板上附有产品出厂检验合格证书（应妥善保管，以便日后查询），拆卸光缆护板时谨防损坏光缆。
 - 5、在施工过程中应注意光缆的弯曲半径不得小于施工规定，光缆不允许出现过度弯曲。
 - 6、布放架空光缆应通过滑轮牵引，架空光缆应避免与建筑物、树木及其它设施磨擦，避免拖地或与其他擦而损伤光缆外皮，必要时应安装保锐硬磨护措施。严禁光缆跳出滑轮后强行牵引，以防光缆被压扁损坏。
 - 7、在光缆线路设计时应尽量避开易燃建筑物如无法避免，光缆应采取防火保护措施。
 - 8、在段长比较长的光缆布放施工中，如需倒盘，光缆必须遵循“8”字盘放。使其光缆完全处于无扭状态。
 - 9、光缆接头终端盒的选用必须符合 YD/T814-1996 和 YD/T925-1997 标准要求的合格接头终端盒，确保光纤在盒内的曲率半径不小于 37.5mm，光纤在盒内余留长度不小于 1.6 m，光缆的加强件牢固地固定在盒上，光缆与盒之间不会发生扭动，箱体密封性能优良，能够阻止水气的进入。
 - 10、在光缆连续时，接头衰减应以 OTDR 双向测试平均值为准。
 - 11、光缆敷设完成，如不能及时连续处理，应将光缆两端头密封，以防止水气侵害光纤。
 - 12、在光缆连续时，若多次连续不下来，建议剪掉一段后再接续（因施工时光缆端头有可能受到机械损伤）。
 - 13、光缆连接完成，宜在光缆接头盒两端预留适量的光缆，并且牢固的盘在余缆架上。
1. The user should roll cable from with FOC in the direction indicated on drum flange board within short distance of no more than 20 meters on alert against damage of barriers on more than 20 meters on alert against damage of barriers on package wooden board.
 2. The user should adopt lifting machines such as fork lift of special steps for loading and unloading cable drum with FOC. Direct rolling or throwing of cable drum with FOC from the truck should be strictly forbidden.
 3. It should be strictly forbidden to lay down or pile up cable drum with FOC. The woodboard should be put under drum wheels to prevent drum from sliding in truck carriage.
 4. The user should avoid repeatedly reeling out FOC in order to keep cable inner structure intact. The user should check outer appearance, type & specification, quantity, length, and attenuation of FOC drum flange board. (The certificate should be kept well for further check later.) The user should keep alert against damage on FOC in dismantling protection package board.
 5. The user should avoid over bending FOC in mounting with paying attention to the bending radius of FOC, which should be no smaller than that stipulated for mounting.
 6. In mounting aerial FOC, the user should draw cable on pulley and avoid friction with building, tree, and other facilities and drawing cable on the ground or friction with sharp edged objects to keep cable from damage on its outer sheath. The protection measures should be taken if necessary. It is strictly forbidden to roughly draw cable after FOC slide out from pulley in order to keep cable from damage.
 7. The user should keep it from inflammable buildings as possible as you can in FOC line design. If it is unavoidable, the measures should be taken to keep FOC from fire.
 8. The user should lay down the cable in “8” shape to keep it from twisting for pieces of long FOC in installation.
 9. The user should adopt qualified connection and terminal boxes stipulated in YD/T814-1996 & YD/T925-1997 to ensure that bending radius of optic fiber in the boxes be no smaller than 37.5mm, remaining fiber length no smaller than 1.6m, and strength member of FOC strongly fixed to the box. The boxes should be moisture-proof with better sealing performance.
 10. The average tested value with OTDR in double direction should be adopted as connection attenuation value in FOC connection.
 11. After completion of laying FOC, if the user could not timely connect the cable, both ends of FOC should be sealed to keep cable from moisture.
 12. If the user fails many times in FOC connection, it is suggested to cut off a section of FOC for connection again. (There is possibility that FOC heads suffered mechanical damage during installation.)
 13. After connection completion, the user had better reserve suitably long FOC at both ends of connection box and fixed it strongly to the rack.
